## Five-Volume Set

The *Environment and Planning* series of journals from Pion are committed to publishing innovative, interdisciplinary quality papers which tackle important questions in urban and regional research. This collection, edited by a stellar editorial team, draws from all four journals to showcase the best of the best on offer in urban research.

**Volume One: Cities and Regions** reflects a selection from the original journal that focuses on the fate of cities and regions and the concerns that plague them all across the world.

**Volume Two: Planning and Design** brings together the seminal articles published in the eponymous journal to promote research relating to spatial problems in the built environment and the spatial structure of cities and regions.

**Volume Three: Government and Policy** presents the path-breaking papers that have been at the forefront of research on government issues and innovations in public policy.

**Volume Four: Society and Space** picks out those articles that exemplify the discussion of the mutually constitutive relationship between the social and the spatial.

**Volume Five: Foundations** edited by series editor Stuart Elden, rounds off the set with a collection of articles that eloquently demonstrate the philosophically sophisticated and practically relevant heart of this remarkable family of journals.
